Content Refresher and Pedagogy Enhancement for Teachers: Probability & Statistics

COURSE SYLLABUS: MTE 504—3 graduate credits

Prerequisites Knowledge of Statistics and Probability content and an undergraduate degree.

Instructor contact information Dr. Mike Hall mihall@scetv.org

Emails will typically be answered within 48 hrs during weekdays and 72 hrs during weekends.

General Description The primary goal of this class is for the student to begin to acquire the techniques necessary to effectively teach Statistics and Probability at the secondary level. This course will focus on the investigation of materials, pedagogy, and technology to teach Statistics and Probability and to refresh content knowledge in ways that conform to the National Council of Teachers of Mathematics (NCTM) standards. Students will examine strategies and skills to creatively engage secondary level mathematics students as they begin to master Statistics and Probability.

Objectives This course is intended for to provide appropriate training for the Statistics and Probability teacher by providing opportunities to

- understand the core concepts of each content area through exploration of problems as they relate to teaching and learning strategies for the specific topics;
- develop an understanding of the role of investigative experiences in each content area which lead to the discovery of key mathematical relationships;
- gain an historical perspective on the development of mathematics in diverse cultures;
- develop specific methods, ideas, materials, models, and activities for teaching the different content that encourage flexible and resourceful problem solving;
- develop methods and ideas for appropriate uses of technology in both teaching and discovery;
- use the different content areas of mathematics as a source of mathematical models in the natural world;
- develop a strong understanding of the different content areas and their roles in the K – 12 mathematics.

Text and Materials

Teaching Secondary Mathematics, Third Edition, Brumbaugh and Rock
Navigating through Data Analysis in Grades 9–12, NCTM

Technology requirements: Computer access with Internet with sufficient bandwidth to stream online videos (i.e., DSL, Cable modem, or T1/T3). Access to email account. DVD player (television or computer).

Blackboard: Students will be given access to the course website through Blackboard. The course materials will ONLY be accessible when you login to this website. You must have an email address and update the site to include your active email. All questions and assignments should be emailed to the address provided on the website. All emails MUST have the subject with the course number followed by the student's last name, comma and first name (for example: MTE 504 Smith, John). To protect the professor's computer from potential viruses, no email will be opened unless the subject is in the correct format. It is the student's responsibility to save all work until a final grade has been issued in case they need to be resent.

DVDs: Four DVDs are provided that contain content information for this course. This information is supplemental and should be used by the student to review content information when necessary.

In addition, practice problem sets are located on the course web site. They are representative of the content knowledge required on the quizzes and the final exam.

Graphing Calculator: The use of a graphing calculator is required. While participants may use any graphing calculator, the supplemental DVDs use the TI-83. The TI-84 is very similar and can be used as well. Knowledge and competence for use of other graphing calculators will be the sole responsibility of the participant.

Course Requirements

This course will be offered through Distance Education. Participating teachers may take up to nine months to complete all requirements. There are no scheduled class sessions or meetings. There is an Internet web site that contains practice problems, three activity packets, three quizzes and a cumulative Final Examination. Modules must be completed sequentially. Each module (activity, practice problems, blog entries and quiz) must be COMPLETE prior to beginning the next module.

Each module includes a reading component. Students are expected to use the activity packet essay as a catalyst for analysis of reading content. The essay should reflect not only knowledge of the content but demonstrate a deep understanding of how this knowledge impacts the teaching of mathematics. The content of the reading will also be covered on the quizzes and the final exam.

Each module includes a set of practice problems (solutions are included). These problems are recommended (but will not be submitted for grading) to assess the student's recall of the required level of mastery of the mathematical content. If the content knowledge is deficient, the student should use the DVDs to achieve this level since this content will be included on the quizzes and the final exam.

Some modules include reading and activities from the *Navigating through Data Analysis* text. These activities should be completed to aid the student in gaining a rich understanding of the teaching of Probability and Statistics. As with the reading, the essay should include the analysis and synthesis of all of components of the module. This material will also be included on the quizzes and the final exam.

Course Timeline

I. Complete each module using the following sequence.

1. Complete practice problems – use DVDs to aid in mastery as needed
2. Complete readings and associated materials
3. Complete Activity Packet
4. Submit Essay
5. Complete online quiz - Essay must be submitted prior to taking the quiz.

II. Complete Final exam – all modules must be completed prior to taking the exam.

Course Policies

1. The participant must master the material assigned for each module.
2. Participants must complete the three activity packets and the four practice problem sets that are provided on the course web site.
3. Each of the four modules will have an accompanying quiz posted on Blackboard. The participant must complete each of these quizzes online.
4. There will be a cumulative final examination. The participants will complete the final exam in the presence of a school or district administrator, have the administrator sign the Proctor Form and mail the Proctor Form and pages used to work out problems on the exam to Tania McDuffie, 226 Hydrick Street, Spartanburg, SC 29306. Students should email the professor to approve an alternate proctoring situation.
5. Blog entries are intended to be an avenue for students to communicate with each other, as well as faculty. Students are encourage to use this tool to share ideas and facilitate discuss about course topics. While students will not be graded on their blog participation, we hope students will see the value in this component of the course and utilize it to enrich their experience.

Grading

Participation as demonstrated through:

Two Activity Essays	60%
Quizzes.....	25%
Final Exam	15%

Course Topics

The topics of this course are arranged by content. While students are expected to have prior knowledge of these specific topics, they will be reviewed on the DVDs and embedded in the pedagogy components of each module.

Module #1

List of Topics	Complete the following assignments in sequential order. All prior material will be covered on the quiz.
1) Introduction 2) Overview of curriculum and topics 3) Exploring Data a. Graphs: mean and standard deviation b. Five-number summary 4) Normal Distribution a. Density curves b. Normal distribution (bell curve) b. Standard normal distribution	Required 1. <i>Teaching Secondary Mathematics, 3rd Ed.</i> , Brumbaugh and Rock, Read Chapter 1 and 2 2. <i>Navigating through Data Analysis in Grades 9–12, Sampling Methods</i> , pp 23–28 Read and complete activities 3. Recommended (but not required): DVD Refresher Content Probability and Statistics Unit I 4. Content Practice Problems: on website 5. Complete Quiz #1

NOTE: You must take quiz #1 BEFORE you can start Module #2.

Module #2

List of Topics	Complete the following assignments in sequential order. All prior material will be covered on the quiz.
1) Quantitative Variables a. Scatterplots b. Correlation (r) c. Linear regression (LSRL) d. Exponential regression e. Power regression 2) Categorical Variables: two-way tables	Required 1. <i>Teaching Secondary Mathematics, 3rd Ed.</i> , Brumbaugh and Rock, Read Chapter 4, 5 and 6 2. <i>Navigating through Data Analysis in Grades 9–12, What would you expect?</i> pp. 31–32 Read and Complete activities 3. Activity #2: Bungee Jump 4. Recommended (but not required): DVD

	<p>Refresher Content Probability and Statistics Unit II</p> <p>5. Content Practice Problems: on website</p> <p>6. Complete Quiz #2</p>
--	--

NOTE: You must submit your Activity Essay for activity #2 and take quiz #2 BEFORE you can start Module #3.

Module #3

List of Topics	Complete the following assignments in sequential order. All prior material will be covered on the quiz.
<p>1) Producing Data</p> <p>a. Sampling</p> <p>b. Experiments</p> <p>c. Simulation</p> <p>2) Probability</p> <p>a. Randomness</p> <p>b. Probability models</p> <p>c. Random variables</p> <p>d. Binomial and geometric distributions</p> <p>e. Sampling distributions</p>	<p>Required</p> <p>1. <i>Teaching Secondary Mathematics, 3rd Ed.</i>, Brumbaugh and Rock, Read Chapter 6, 7 and 15</p> <p>2. <i>Navigating through Data Analysis in Grades 9–12, Simulating and Counting Successes</i>, pp. 56–60 Read and complete activities</p> <p>3. Activity #3: Taxi Cabs</p> <p>4. Recommended (but not required): DVD Refresher Content Probability and Statistics Unit III</p> <p>5. Content Practice Problems: on website</p> <p>6. Complete Quiz #3</p>

NOTE: You must submit your Activity Essay for activity #3 and take quiz #3 BEFORE you can start Module #4.

Module #4

List of Topics	Complete the following assignments in sequential order. All prior material will be covered on the quiz.
<p>1) Introduction to Sampling Distributions</p> <p>a. Confidence intervals</p> <p>b. Tests of significance (hypothesis testing)</p> <p>c. Decisions based on inference</p> <p>2) Inference for means</p> <p>3) Inference for proportions</p>	<p>Required</p> <p>1. <i>Navigating through Data Analysis in Grades 9–12, Problem 1: The Salk Polio Vaccine</i>, pp. 79–82</p> <p>Problem 5: Designing a Study, pp. 88–90 Read and complete</p>

	<ol style="list-style-type: none">2. Activity #4: Designing a Study3. Recommended (but not required): DVD Refresher Content Probability and Statistics Unit IV4. Content Practice Problems: on website5. Complete Quiz #4
